

# Turn On Lights Using Triggers and Blueprint

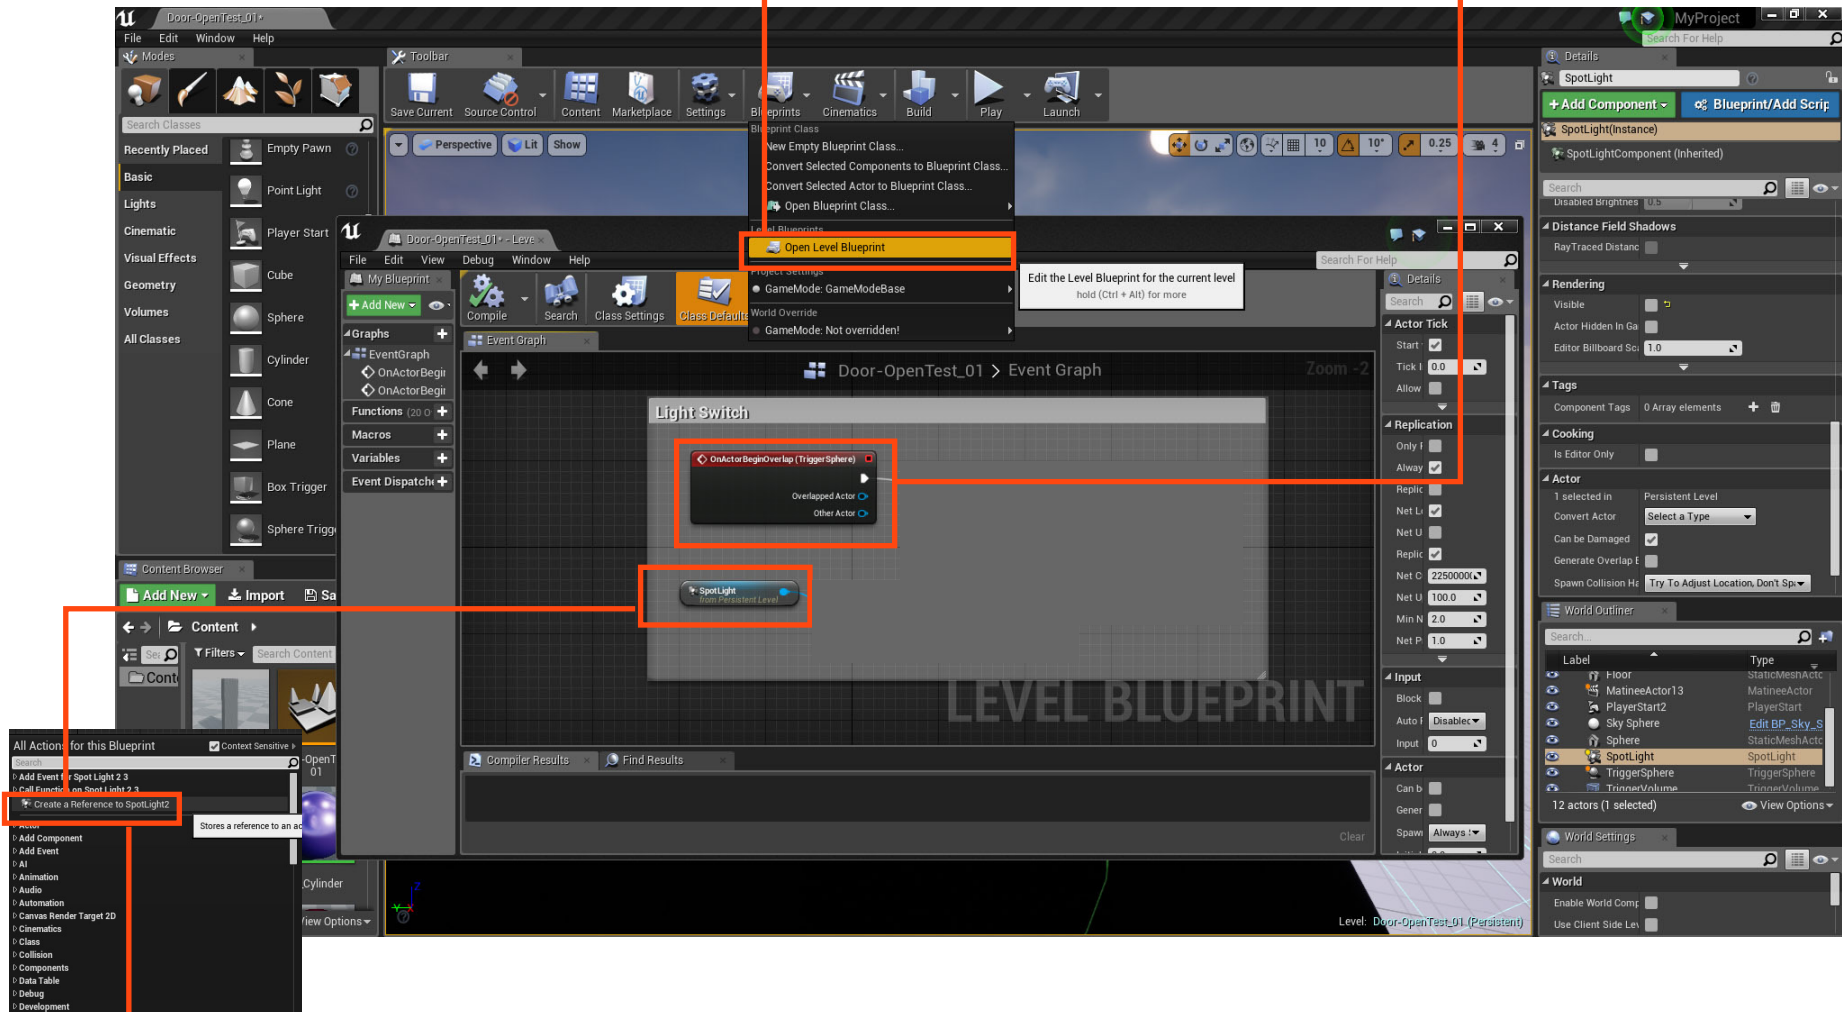

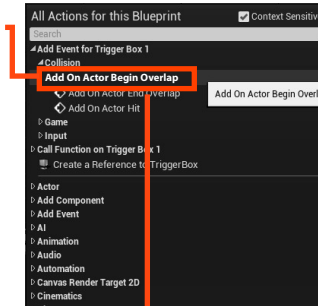

Unreal 4 has several types of lights. Lights are fully adjustable. You can dim them, color them, point them, etc. Take a while and play with the light. Color is a particularly powerful lighting effect it can create mood to your level.

1. Place a Spot light into your scene and turn off its' visibility in the Details panel
2. drag a "Box Trigger" into the scene.

3. Select the Trigger and open the Blueprint

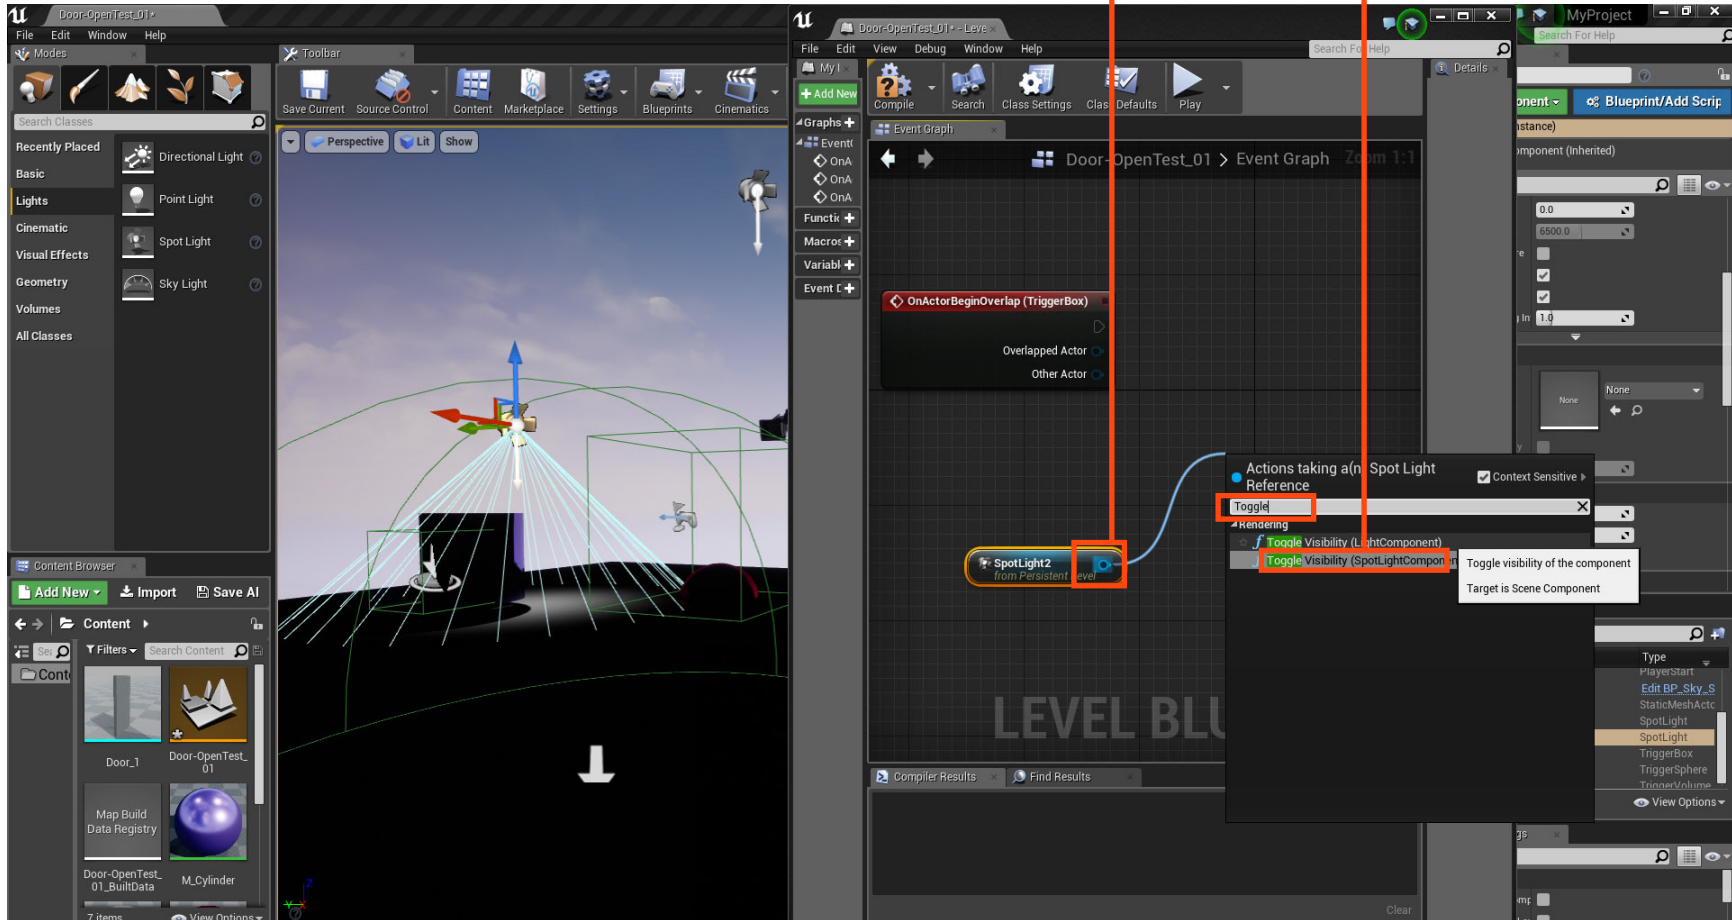

4. In Blueprint right click and choose

5. In the Viewport select the Spot Light. Right click in Blueprint and create a reference.

6. Drag a connect out from the node and type "Toggle" in the box

7. Select

8. Link the nodes together. Your light should now turn on when you enter the trigger zone.
