

# IMPORTANT FEATURES TO INCLUDE

## PRIMARY FOLDS

These are folds made when two major features collide together. Example, when the upper lip meets the cheek, the Naso-Labial Fold is formed.

GLABELLUM FOLDS

- Epicanthic Fold
- Superior Orbital Fold
- Inferior Orbital Fold
- Naso-Labial Fold
- Oral Commisure Fold
- Mental-Labial Fold

## EARS

The ear is not a random set of wrinkles. Almost all mammalian ears have common elements. They are:

- Helix
- Anti-Helix
- Triangular Fossa
- Tragus
- Anti-Tragus
- Lobe

## SECONDARY WRINKLES

Secondary wrinkles are different from primary folds. They tend to be caused by age and use.

Example, the wrinkles on the forehead and at the corners of the eyes comes as the creature ages.

- Forehead
- Corners of the eyes
- Lips

## EYES

Eyes are particularly important. Eyes are the first feature noticed on a face. It is important that they be round and the eyelids curve about this roundness. The corners must be well defined and crisp.
